

HOSPITAL HEALTH SCREENINGS

Available every February & September at

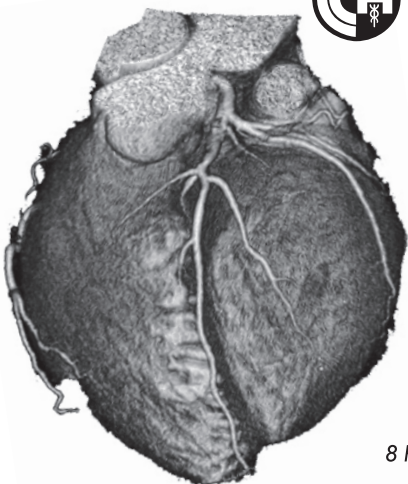

Serving the Greater DeWitt Area

HEART SCAN

CT Coronary Calcification Screen

Cuero Community Hospital is offering a heart calcification screening for \$150 during the month of February, which measures the amount of plaque in the heart arteries. This heart screen can also be paired with additional screenings (listed below) to provide a better insight of your health.

Participants should not have any caffeine 8 hours prior to the heart screening. Not recommended for those who have had bypass surgery or have a pacemaker.

ADDITIONAL HOSPITAL HEALTH SCREENINGS INCLUDE:

- **Blood Pressure**
- **Lab Work (Blood Draw):** Lipid Profile (Cholesterol, Triglycerides, HDL), A1C (Blood Glucose), PSA (Prostate) for men; *fasting 12 hours prior is recommended.*
- **Carotid Artery Screen**
Ultrasound exam to check the amount of plaque buildup in the carotid artery located in the neck. Plaque buildup in this artery prevents blood flow and can cause a stroke; noninvasive.
- **Abdominal Aortic Aneurysm Screen**
Ultrasound exam to indicate if an enlargement of the aorta is present. This can lead to a rupture, which is an extreme medical emergency; noninvasive. No heavy eating prior & wear 2 piece clothing (shirt with pants/shorts).
- **Bone Density/Osteoporosis Screen**
This screen gives a reading based from your heel to estimate a bone density measurement and indicate risk for osteoporosis; noninvasive.
- **EKG (Electrocardiography)**
EKG is used to determine if a heart arrhythmia (irregular heart beat) is present; noninvasive.
- **Pulse Oximetry**
Exam checks oxygenation status from the finger tissues; noninvasive.

Screenings will be available February 2016.

**Wednesdays, 8-10am
& Fridays, 8-10am**
